

BriefWise 9.9 - Visual Summary Report (Asbestos MSJ Defense)

Original Prompt

Activate BriefWise 9.9 (Sealed Chain v2+). Assume we are opposing summary judgment in an asbestos case in Philadelphia. The plaintiff has mesothelioma and testified to assisting with brakes, clutches, and gaskets from multiple branded products in the 1970s and 1980s. Assume expert causation testimony is locked.

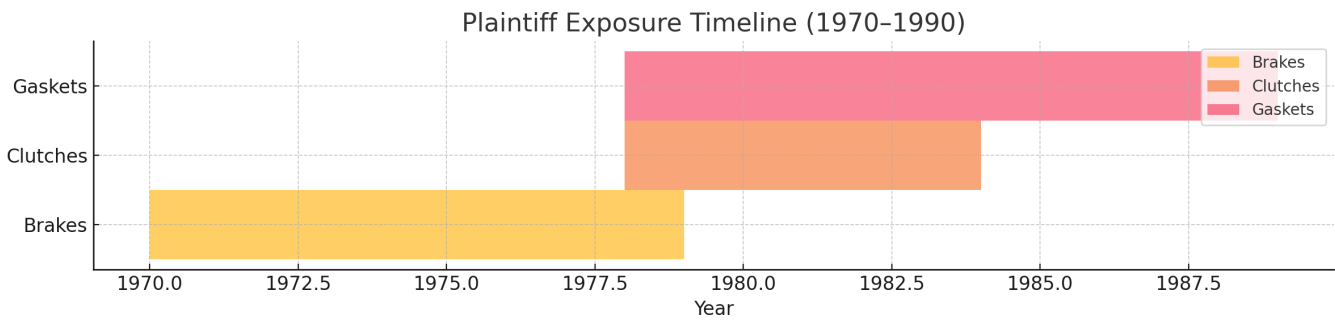

Generate visual legal outputs that summarize the case strength and strategic posture, including:

1. A timeline (visual) from 1970 to 1990 showing plaintiffs exposures by product type and brand (gasket, clutch, brake color-coded).
2. A liability wheel showing the percentage exposure share of each defendant (sum to 100%), annotated with MSJ risk color codes.
3. A garage exposure layout map showing where plaintiff stood, use of air compressor, and dust zones.
4. A causation proof diagram connecting deposition testimony to product IDs, exposure type, and expert opinion.
5. A summary judgment survival flowchart applying Rost, Linster, and Weible logic step by step.
6. A highlight box quoting the single strongest sentence of testimony supporting exposure to a defendants branded asbestos product.

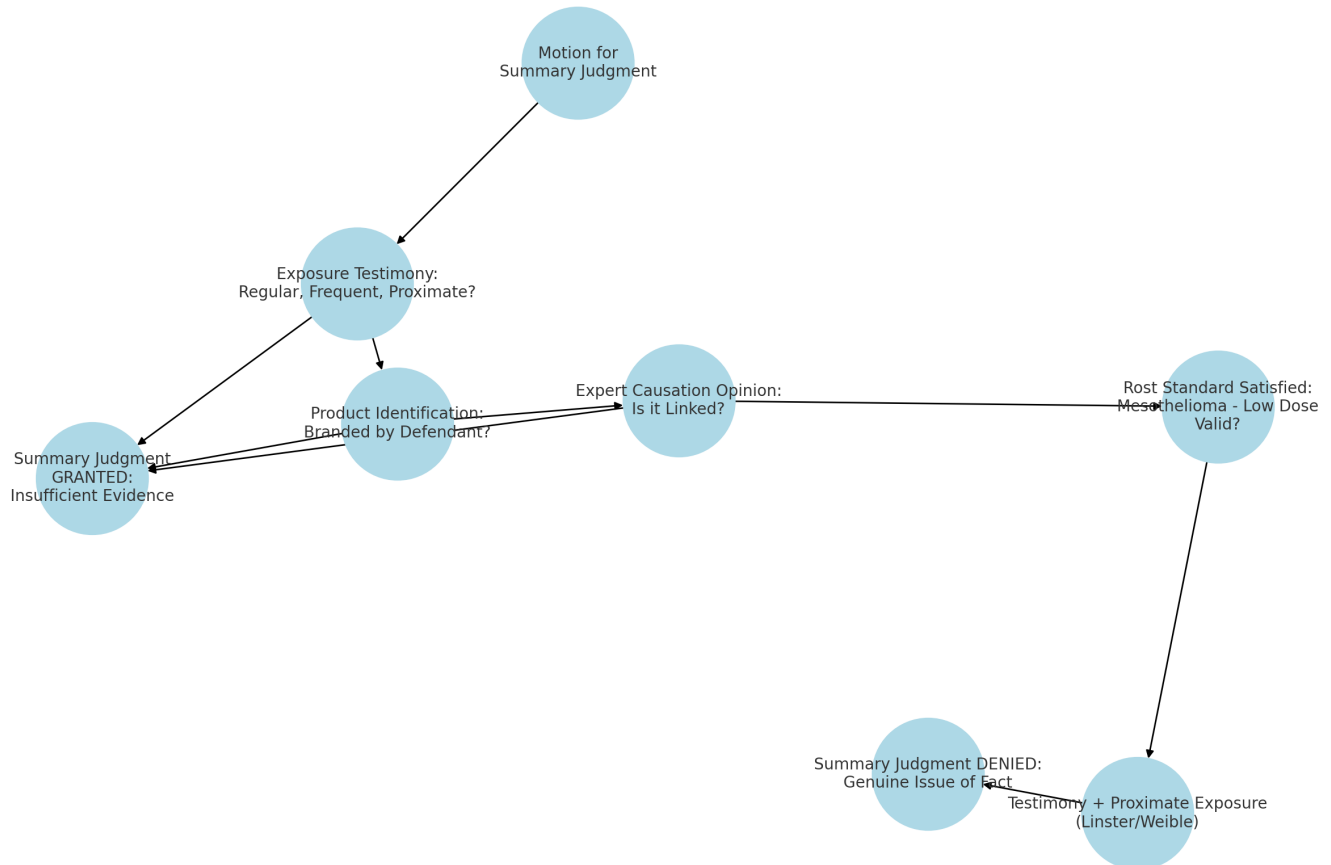

Use Pennsylvania law. Visually emphasize the regular, frequent, proximate standard. Assume all testimony is already in record. Make it trial-level persuasive.

Trigger all available visual and adversarial BriefWise functions.

1. Exposure Timeline (1970-1990)

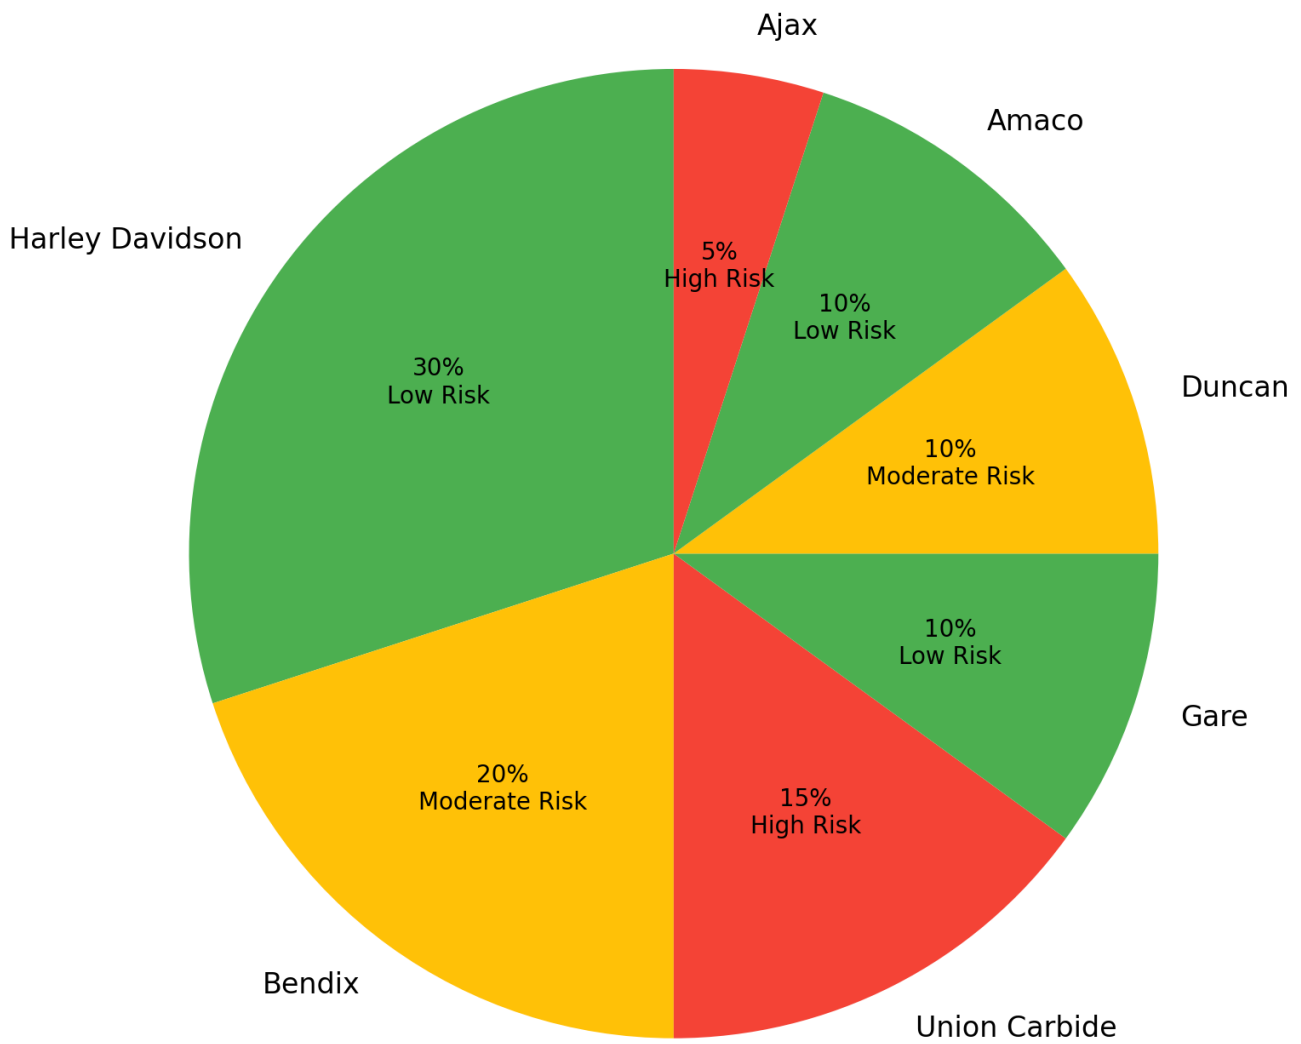

2. MSJ Survival Flowchart (Rost / Linster / Weible)

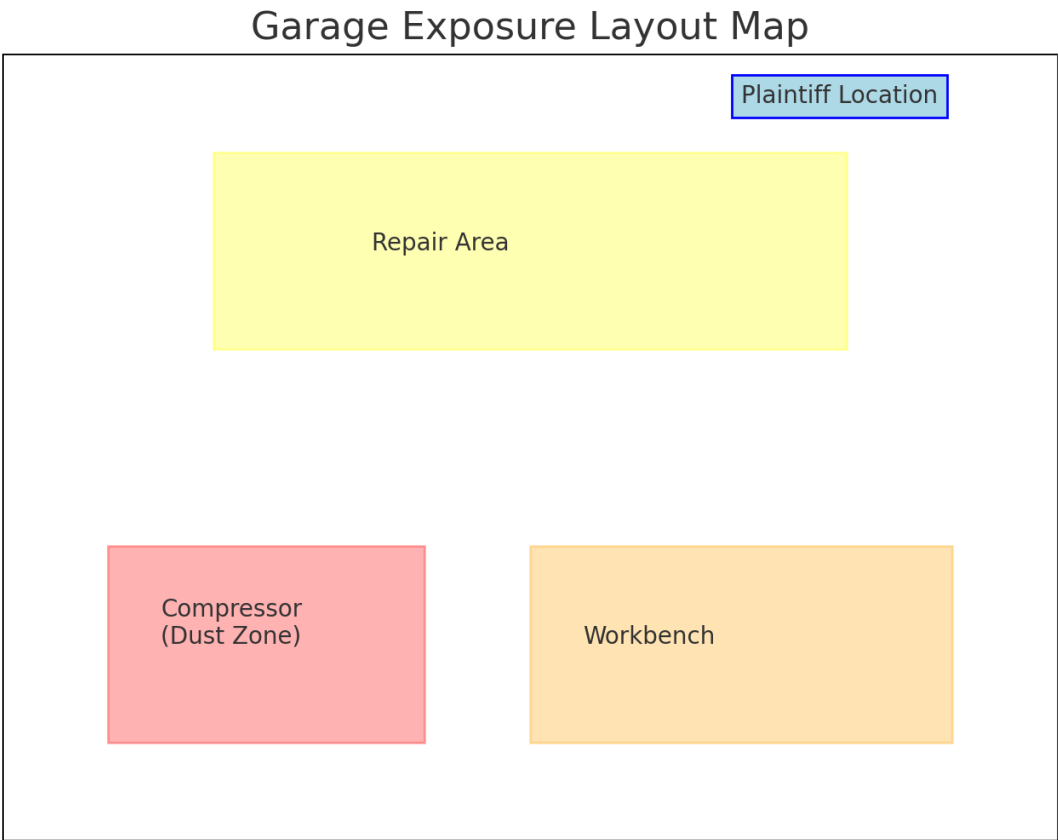

3. Defendant Liability Wheel (Exposure Share + MSJ Risk)
